Ensuring Proper Planning for De-Energization

There are many safety initiatives underway at the California Public Utilities Commission (CPUC) as it works to assure Californians' access to safe and reliable utility infrastructure and services. Safety-related articles will be featured again in future issues

By Elizaveta Malashenko, CPUC Safety and Enforcement Division Director

As Director of the Safety and Enforcement Division at the CPUC, I understand that power outages of any period of time can be very disruptive to the local economy, impair access to essential services, and pose health and safety risks.

As such, state law allows utilities to shut off power to customers (called de-energizing) only when a utility reasonably believes that there is an "imminent and significant risk" to safety, such as when strong winds may topple power lines or cause major vegetation-related damage to power

energization may be necessary to prevent an incident that threatens public safety, loss of electric power can have particularly serious impacts on the elderly and those dependent on electricity for medical reasons. In addition, it can make evacuations and the work of first responders more difficult.

Larkfield Wikiup neighborhood devastation from the October 2017 Santa Rosa Tubbs Firestorm

At the CPUC, this is an issue we take extremely seriously. That's why this past July, as our state

lines and lead to increased risk of fires. Proactive de-energization is a drastic step, but in certain conditions, it is also a step that can save lives, protect property, and prevent fires. While de-

was dealing with a seemingly endless string of highly destructive wildfires, the CPUC put in place additional consumer protections for when utilities de-energize. [More](#)

Providing Safe, Clean, Reliable Water for Monterey Peninsula

By Commissioner Liane Randolph

Few issues confronting California are more complex and contentious than water. Our job at the CPUC is to ensure that we have the safe, clean, and reliable water supply we need in a state that is home to approximately 40 million people. The difficulty of that task was driven home yet again by the lengthy CPUC proceeding that culminated last month with a unanimous vote clearing the way for a much-needed desalination plan on the Monterey Peninsula.

Old Fisherman's Wharf waterfront in Monterey Bay, California

"Monterey Peninsula residents and businesses have been struggling with water constraints since the 1940s," an earlier CPUC ruling noted..."Public

and private interests have a long and contentious history of trying to find a viable solution to this problem. Conflicting community values have rendered other proposals unworkable and unachievable. We have been addressing these concerns at this CPUC alone since 1997--well over a decade. It is evident and timely that we must arrive at a supply-based solution and approve a project."

After our Sept. 13, 2018, vote on the desalination plant, which also certifies the environmental work both on a state and federal level, one local newspaper called our action a "decision for the history books." That's because it takes so many turns and accomplishes so much.

The Monterey Peninsula is a beautiful and special place, but its longstanding water problems became particularly acute in 2009. That's when the State Water Resources Control Board (SWRCB) issued a cease and desist order against the local water provider, California-American Water Co., because Cal-Am had spent years diverting about four times the amount of water to which it was entitled from the Carmel River. Since that time, the communities on the Peninsula have worked hard to try to resolve this issue that is so critical to their quality of life. In September 2016, the CPUC approved Cal-Am's purchase agreement with the Pure Water Monterey recycled water project, which will provide additional supply once operational. But even that innovative project was not sufficient to meet demand and more supply is needed. [More](#)

Addressing Biomass in California

By Michael Picker, CPUC President

With California's commitment to renewable energy and the growing concern about wildfires, biomass electrical generation has received a lot of attention recently as a tool for addressing both challenges, but for a number of reasons this approach still has a lot to overcome.

Both Senate Bill (SB) 901, signed recently by Governor Jerry Brown, and the May 2018 "California Forest Carbon Plan," put forward by the California Natural Resources Agency, CAL FIRE, and the California Environmental Protection Agency, call for increased state support for biomass, but the Carbon Plan also articulates part of the challenge.

"The costs of transporting forest biomass are significant relative to the material's value, so distance from source to processing site will determine commercial feasibility," the Plan states. "Regional and local approaches will also be better suited to discussions related to facility siting, economic development strategies, local impacts of forestry operations, and climate resilience of both natural resources and the human populations that depend on them.

Biomass timber removal down a forest footpath

Additionally, a clean energy policy has a different set of concerns than the issue of safety from wildfires. For clean energy, policymakers focus on emissions, price, and the ability of new resources to work together in ways that keep the lights on.

Fire safety revolves around reducing fuel, hardening communities to withstand ferocious fires, and clearing vegetation from near electric lines. While these policies are not contradictory, there are obstacles to making them work in harmony. [More](#)

Subject: Press Release: CPUC Acts to Further Protect State from Wildfires Related to Utility Electric Facilities

FOR IMMEDIATE RELEASE

PRESS RELEASE

**CPUC ACTS TO FURTHER PROTECT STATE FROM WILDFIRES
RELATED TO UTILITY ELECTRIC FACILITIES**

SAN FRANCISCO, October 25, 2018 - The California Public Utilities Commission (CPUC) today acted to further protect the state from wildfires related to electric facilities by setting the framework to provide guidance on initial utility wildfire mitigation plans, and inviting the input of all stakeholders in guiding its approach.

Senate Bill 901 requires electric utilities to prepare and submit wildfire mitigation plans that describe the utilities' plans to prevent, combat, and respond to wildfires affecting their service territories. Through the proceeding it opened today, the CPUC will review the initial plans, and develop and refine the content of and process for review and implementation of wildfire mitigation plans to be filed in future years.

"This is the first of many steps the CPUC will take to implement Senate Bill 901, which addresses a number of issues in our jurisdiction related to wildfires," said CPUC President Michael Picker. "Our immediate task is to develop the first round of the annual utility wildfire mitigation plans and to consider requirements for subsequent plans in the future. This issue is vital for the safety of California and we will work quickly and diligently to get it done."

Investor-owned utilities have been required to develop wildfire mitigation plans since 2017. Senate Bill 901 modified those existing requirements in a number of ways, including requiring a more nuanced and detailed list of information that the utilities must provide in their plans. In addition, the CPUC will review the plans, modify the plans when necessary, and eventually adopt plans. The bill also directs the CPUC to pursue enforcement actions for non-compliance with the plans.

The utilities that are required to participate in this proceeding are Pacific Gas and Electric Company, Southern California Edison, San Diego Gas & Electric, Liberty Utilities/CalPeco Electric, Bear Valley Electric Service, and Pacific Power.

The CPUC invites the input of all stakeholders in guiding its approach. The CPUC has a Memorandum of Understanding with the California Department of Forestry and Fire Protection (CAL FIRE), and has long worked with CAL FIRE on improving wildfire mitigation. Based on that work and input from the parties, the proceeding opened today will include development of proposed guidance for what the electric utilities' wildfire mitigation plans should contain.

The proceeding opened today is the first step in implementing one central aspect of the sweeping requirements of Senate Bill 901. Because of California's recent experience that the wildfire season is beginning sooner and ending later, it is important to have the initial set of electric utility wildfire mitigation plans approved as close to the beginning of summer 2019 as possible, as directed in the legislation. As such, at times the proceeding may move very quickly, with either shortened deadlines or fewer rounds of input. All parties should be prepared to act on short deadlines so the CPUC can meet the legislative mandate, consistent with due process.

"Wildfires represent a serious and pervasive threat to the State, which will only intensify as our climate further changes," said Commissioner Clifford Rechtschaffen. "The proceeding we opened today is the first step in ensuring that the wildfire mitigation plans of our electric utilities meet the very high standards set forth in Senate Bill 901."

The proposal voted on is available at:

<http://docs.cpuc.ca.gov/PublishedDocs/Published/G000/M233/K780/233780452.PDF>.

The CPUC regulates services and utilities, safeguards the environment, and assures Californians' access to safe and reliable utility infrastructure and services. For more information on the CPUC, please visit www.cpuc.ca.gov.

CALIFORNIA PUBLIC UTILITIES COMMISSION

Stakeholder Guidance Sought for *Utility Wildfire Mitigation Plans*

Dear Greg Bolin, Vice Mayor, Paradise:

CPUC has opened proceeding R. 18-10-007 to guide and review investor owned electric utilities' wildfire mitigation plans. Stakeholders are urged to provide their input.

Why Provide Input:

Stakeholder input will assist in determining the scope of the proceeding, provide guidance to the electric utilities on what plans should contain, and will be integral to the review of final plans. Utility wildfire mitigation plans are central to California's strategy to prevent and prepare for catastrophic wildfires under SB 901, and stakeholder review and input is crucial.

Participation in this proceeding is your community's opportunity to provide guidance and review of wildfire plan components including:

- wildfire prevention strategies for electric utilities
- protocols for mitigating impacts of public safety power shutoffs
- utility procedures for maintenance and inspection of lines
- outreach to first responders and customers, including low-income, elderly, disabled, and those with limited English
- restoration of service after a wildfire

How:

In order to have the plans in place for traditional fire season, the CPUC has adopted an expedited schedule for this proceeding. Please be prepared to participate and give input by the following dates. Note that you must become a party to the proceeding to submit formal comments. Becoming a party is cost free and easy, please see this [webpage](#) or email public.advisor@cpuc.ca.gov if you require assistance.

November 14, 2018: Give comments on the scope of the proceeding and discuss schedule and process at the prehearing conference at 10:30 am in Commission hearing room A, 505 Van Ness Avenue, San Francisco. The prehearing conference will be webcast at: <http://www.adminmonitor.com/ca/cpuc>

December 15, 2018 (date subject to change): Formal comments to instruct the electric utilities on their initial plans are due within 10 days of the Scoping Memo being issued. The Scoping Memo is scheduled to be issued in early December.

December 31, 2018: Submit informal comments between now and December 31, 2018 to public.advisor@cpuc.ca.gov

February 2019: Wildfire mitigation plans are scheduled to be submitted in early February. Formal comments due within 20 days of their submittal.

Further Information:

Under SB 901 the following utilities are required to develop wildfire mitigation plans: PG&E, Southern California Edison, SDG&E, PacifiCorp/Pacific Power, Liberty Utilities, and Bear Valley/Golden State Water. The required elements of the plans can be found in PUC 8386 (c). These plans will be updated annually. The text of PUC 8386 (c), as well as further information on the scope and schedule of the proceeding can be found in the Order Instituting Rulemaking at: <http://docs.cpuc.ca.gov/PublishedDocs/Published/G000/M233/K780/233780452.PDF>

You can find further information for the proceeding, including links to all documents (the docket) and a subscription service at: <http://cpuc.ca.gov/SB901>

A GIS version of CPUC's fire threat map may be found at: <https://ia.cpuc.ca.gov/firemap/>

And of course, you may always contact me for further information or assistance.

Please be prepared to participate and give input by the following dates. Note that you must become a party to the proceeding to submit formal comments. Becoming a party is cost free and easy, please see this [webpage](#) or email public.advisor@cpuc.ca.gov if you require assistance.

November 14, 2018: Give comments on the scope of the proceeding and discuss schedule and process at the prehearing conference at 10:30 am in Commission hearing room A, 505 Van Ness Avenue, San Francisco. The prehearing conference will be webcast at: <http://www.adminmonitor.com/ca/cpuc>

December 15, 2018 (date subject to change): Formal comments to instruct the electric utilities on their initial plans are due within 10 days of the Scoping Memo being issued. The Scoping Memo is scheduled to be issued in early December.
December 31, 2018: Submit informal comments between now and December 31, 2018 to public.advisor@cpuc.ca.gov
February 2019: Wildfire mitigation plans are scheduled to be submitted in early February. Formal comments due within 20 days of their submittal.

Further Information:

Under SB 901 the following utilities are required to develop wildfire mitigation plans: PG&E, Southern California Edison, SDG&E, PacifiCorp/Pacific Power, Liberty Utilities, and Bear Valley/Golden State Water. The required elements of the plans can be found in PUC 8386 (c). These plans will be updated annually. The text of PUC 8386 (c), as well as further information on the scope and schedule of the proceeding can be found in the Order Instituting Rulemaking at: <http://docs.cpuc.ca.gov/PublishedDocs/Published/G000/M233/K780/233780452.PDF>

You can find further information for the proceeding, including links to all documents (the docket) and a subscription service at: <http://cpuc.ca.gov/SB901>

A GIS version of CPUC's fire threat map may be found at: <https://ia.cpuc.ca.gov/firemap/>

And of course, you may always contact me for further information or assistance.

Subject: Input Sought on Utility Fire Mitigation Plans

CALIFORNIA PUBLIC UTILITIES COMMISSION

Stakeholder Guidance Sought for *Utility Wildfire Mitigation Plans*

Dear Melissa Schuster, Council Member, Paradise:

CPUC has opened proceeding R. 18-10-007 to guide and review investor owned electric utilities' wildfire mitigation plans. Stakeholders are urged to provide their input.

Why Provide Input:

Stakeholder input will assist in determining the scope of the proceeding, provide guidance to the electric utilities on what plans should contain, and will be integral to the review of final plans. Utility wildfire mitigation plans are central to California's strategy to prevent and prepare for catastrophic wildfires under SB 901, and stakeholder review and input is crucial.

Participation in this proceeding is your community's opportunity to provide guidance and review of wildfire plan components including:

- wildfire prevention strategies for electric utilities
- protocols for mitigating impacts of public safety power shutoffs
- utility procedures for maintenance and inspection of lines
- outreach to first responders and customers, including low-income, elderly, disabled, and those with limited English
- restoration of service after a wildfire

How:

In order to have the plans in place for traditional fire season, the CPUC has adopted an expedited schedule for this proceeding. Please be prepared to participate and give input by the following dates. Note that you must become a party to the proceeding to submit formal comments. Becoming a party is cost free and easy, please see this [webpage](#) or email public.advisor@cpuc.ca.gov if you require assistance.

November 14, 2018: Give comments on the scope of the proceeding and discuss schedule and process at the prehearing conference at 10:30 am in Commission hearing room A, 505 Van Ness Avenue, San Francisco. The prehearing conference will be webcast at: <http://www.adminmonitor.com/ca/cpuc>

December 15, 2018 (date subject to change): Formal comments to instruct the electric utilities on their initial plans are due within 10 days of the Scoping Memo being issued. The Scoping Memo is scheduled to be issued in early December.
December 31, 2018: Submit informal comments between now and December 31, 2018 to public.advisor@cpuc.ca.gov
February 2019: Wildfire mitigation plans are scheduled to be submitted in early February. Formal comments due within 20 days of their submittal.

Further Information:

Under SB 901 the following utilities are required to develop wildfire mitigation plans: PG&E, Southern California Edison, SDG&E, PacifiCorp/Pacific Power, Liberty Utilities, and Bear Valley/Golden State Water. The required elements of the plans can be found in PUC 8386 (c). These plans will be updated annually. The text of PUC 8386 (c), as well as further information on the scope and schedule of the proceeding can be found in the Order Instituting Rulemaking at: <http://docs.cpuc.ca.gov/PublishedDocs/Published/G000/M233/K780/233780452.PDF>

You can find further information for the proceeding, including links to all documents (the docket) and a subscription service at: <http://cpuc.ca.gov/SB901>

A GIS version of CPUC's fire threat map may be found at: <https://ia.cpuc.ca.gov/firemap/>

And of course, you may always contact me for further information or assistance.

Working for California | November 2018 Edition

Moving Quickly on Wildfire Safety Planning

There are many safety initiatives underway at the California Public Utilities Commission (CPUC) as it works to assure Californians' access to safe and reliable utility infrastructure and services. Safety-related articles will be featured again in future issues.

The tragic wildfires this month are being investigated by the appropriate authorities. But it is already evident that the loss of life and property due to the wildfires in Northern and Southern California in November 2018 exceed historical marks by any measure.

The California Public Utilities Commission (CPUC) is one of the government agencies tasked with ensuring that investor-owned utilities operate a safe and reliable grid. This includes developing regulations that establish the minimum requirements for utilities to maintain safety of their equipment, including mitigating risks of electric facilities igniting wildfires. CPUC staff perform audits and field inspections to monitor utility compliance with CPUC requirements, as well as

Utility wildfire planning is a focus of new legislation

major fire, CPUC staff conducts an investigation in parallel and in collaboration with the California Department of Forestry and Fire Protection (CAL FIRE). When CPUC staff identifies violations appropriate enforcement actions are taken, which can include fines of \$50,000 per violation per day and additional penalties.

The CPUC works continuously to improve our safety regulations and over the past four years we have adopted more than 20 decisions to strengthen wildfire prevention requirements. But we need to do much more. Acting on one of the

major bills to emerge from the last legislative session, the CPUC has begun a new proceeding on wildfire mitigation plans required from the state's regulated electric utilities. [More](#)

Supplier Diversity Program Tops \$10 Billion

In 1988, when the CPUC launched its voluntary Utility Supplier Diversity Program so California's regulated utilities would procure more goods and services from firms owned by women, minorities and disabled veterans, the first-year totaled approximately \$7 million in procurement from these groups by utilities.

Celebrating 30 years of Supplier Diversity

In 2017, that number topped \$10 billion, an impressive new benchmark for a program CPUC President Michael Picker recently called "a great accomplishment" and one of the largest business-

driven social justice programs in the state.

"While the goal is to increase competition and allow new entrepreneurs to compete on an even playing field, (the program) also enriches the same communities these companies sell their products and services to," President Picker said during his opening remarks at an Oct. 4 hearing on the program in Richmond that was attended by about 200 people. "It's a way to prevent utility dollars from leaking out of the state. It's a way to help build a business infrastructure that lasts and persists and sustains in communities."

He and his fellow Commissioners heard from utility executives, diversity vendors and interest groups, community activists, and others about the program to encourage investor-owned utilities, water companies, telecommunication service providers, and other CPUC-regulated entities to procure or contract goods and services from women, minority, disabled veteran and/or LGBT-owned businesses.

Launched after a series of statutes passed by the Legislature 30 years ago, 34 California utilities and telecommunications companies now participate in the program.

In the process, the program has become a critical driver of economic development and job creation in diverse communities across California, serving as a template for other states. [More](#)

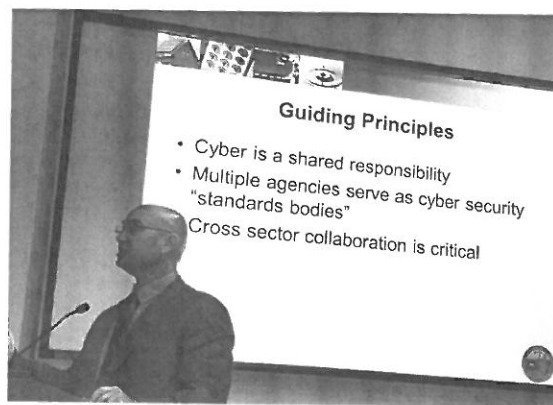

Meet the CPUC's Cybersecurity Manager

Danjel Bout, the CPUC's new Utility Cybersecurity Project Manager, wasn't born when the film "2001: A Space Odyssey" introduced into the mainstream the notion of weaponized Artificial Intelligence and human vulnerability from what is now known as the "Internet of Things."

But in the short 50 years since those notions were dismissed as science fiction, Americans have become dependent on the Internet working properly for such things as electricity, food and service delivery schedules, water delivery and purification, medical research and services, vehicle manufacturing, government subsidies and tax refunds, pension payouts, telephone service, national defense, and social connectivity.

"Cyber threats to infrastructure pose an almost existential threat," Bout says. "We cannot rely on simply learning from experience. We have to anticipate and proactively address the risks we collectively face."

Bout's mission is to not only address threats to utility cybersecurity directly but also to ensure that threats to other sectors do not affect utility services. That means coordinating with every level of government and business at each step of policy creation and implementation – all while insuring

Bout at the Oct. 25 Commission Voting Meeting presenting on his plans for the Utility Cyber Security Branch

that discussing threats does not tip off hackers to vulnerabilities.

"The security engineering mantra 'Security Through Obscurity' is more challenging with government entities who must operate with transparency," Bout says. He speaks with considerable experience when it comes to interagency coordination. [More](#)

Rebuilding Transportation Enforcement

By Commissioner Liane M. Randolph

In February 2017, the CPUC received the results of an independent consultant's study of our Transportation Enforcement Branch (TEB) that—by any measure—were sobering.

As the report by Crowe LLP noted, people inside and outside the CPUC knew of a "widespread awareness that the branch has been struggling to meet its statutory mandates to protect consumers and ensure public safety on California's roadways."

Auditors had reached the same general conclusion, citing high turnover and vacancies in key management positions among the reasons that "the Commission's oversight of passenger carriers is insufficient to address complaints against passenger carriers." This was a problem that cried out to be addressed.

During the three years I have been a CPUC Commissioner, the rise of Transportation Network Companies (TNCs) like Uber and Lyft and the move toward driverless vehicles have disrupted the for-hire transportation industry and made the TEB's shortcomings even more acute. But as I shared at our Oct. 25, 2018 Voting Meeting in San Francisco, I believe we've been able to make some significant strides in under two years.

With strong direction from the Legislature and the provisions of Sen. Jerry Hill's Senate Bill (SB) 541, we have been adding staff, expertise, management capabilities, enforcement, and more.

We've also been able to transfer several regulatory responsibilities to other state agencies that were a better fit, allowing us to more quickly strengthen our core areas of responsibility.

An earlier review in 2014 by the Board of State

There's more work to be done, but I believe are well on our way toward rebuilding our TEB. [More](#)

Rail Transit Safety Program Gets Federal Certification

The CPUC's Rail Transit Safety Program received some good news last month when it was notified by the U.S. Department of Transportation's Federal Transit Administration (FTA) that the program is now certified by the federal agency.

FTA certification is crucial for a number of reasons, not the least of which is that it's required by law. The CPUC State Safety Oversight Program, (SSO) achieved its designation well ahead of the April 2019 deadline, which—also by federal law—cannot be waived or extended.

The certification is considered to be the highest level of safety for rail transit riders and workers and enables the CPUC to continue receiving federal funds for its rail safety program.

California's rail transit safety program has long been considered the gold standard of state rail transit safety programs, but federal certification is crucial because without it, more than \$1 billion in FTA transit grant funds could be withheld

CPUC workers inspecting a rail yard in Richmond

throughout the state.

Daren Gilbert, manager of the Rail Transit Safety Branch (RTSB) located in the CPUC's Safety and Enforcement Division (SED), called the federal certification "a big milestone for the CPUC and our Branch." [More](#)

Ensuring an Equitable Electric Market for Customers

By Commissioner Carla J. Peterman

During the six years I've had the privilege of serving on the CPUC, few decisions have been more closely watched or anticipated than the votes we took last month regarding an updated methodology for what's known in California's regulated electricity markets as the PCIA, which is short for Power Charge Indifference Adjustment.

Because the issue is so impactful and technical, as the Commissioner assigned to the proceeding I'd like to offer some perspective on my goals for what the decision seeks to accomplish.

Simply put, the PCIA ensures that customers who leave traditional utilities like Pacific Gas and Electric Company (PG&E) for community choice aggregators (CCAs) or energy service providers (ESPs) do not pay more than their fair share of

environment of electricity choice, the PCIA is a mechanism, required by law, to protect against cost shifts between customers.

The PCIA gets complicated, among other reasons, because most utility planning happens on 10 and

costs for power that was bought on their behalf. The PCIA works the other way, too – ensuring that customers who stay with a utility don't have to pay all of the costs for power that was bought for customers now served by a CCA. In an

20-year planning horizons. That means a utility must anticipate what its customers will demand far in the future and make investments based on that planning. [More](#)

The CPUC's Rail Transit Safety Program received some good news last month when it was notified by the U.S. Department of Transportation's Federal Transit Administration (FTA) that the program is now certified by the federal agency.

FTA certification is crucial for a number of reasons, not the least of which is that it's required by law. The CPUC State Safety Oversight Program, (SSO) achieved its designation well ahead of the April 2019 deadline, which—also by federal law—cannot be waived or extended.

The certification is considered to be the highest level of safety for rail transit riders and workers and enables the CPUC to continue receiving federal funds for its rail safety program.

California's rail transit safety program has long been considered the gold standard of state rail transit safety programs, but federal certification is crucial because without it, more than \$1 billion in FTA transit grant funds could be withheld

CPUC workers inspecting a rail yard in Richmond

throughout the state.

Daren Gilbert, manager of the Rail Transit Safety Branch (RTSB) located in the CPUC's Safety and Enforcement Division (SED), called the federal certification "a big milestone for the CPUC and our Branch." [More](#)

Ensuring an Equitable Electric Market for Customers

By Commissioner Carla J. Peterman

During the six years I've had the privilege of serving on the CPUC, few decisions have been more closely watched or anticipated than the votes we took last month regarding an updated methodology for what's known in California's regulated electricity markets as the PCIA, which is short for Power Charge Indifference Adjustment.

Because the issue is so impactful and technical, as the Commissioner assigned to the proceeding I'd like to offer some perspective on my goals for what the decision seeks to accomplish.

Simply put, the PCIA ensures that customers who leave traditional utilities like Pacific Gas and Electric Company (PG&E) for community choice aggregators (CCAs) or energy service providers (ESPs) do not pay more than their fair share of

environment of electricity choice, the PCIA is a mechanism, required by law, to protect against cost shifts between customers.

The PCIA gets complicated, among other reasons, because most utility planning happens on 10 and

costs for power that was bought on their behalf. The PCIA works the other way, too – ensuring that customers who stay with a utility don't have to pay all of the costs for power that was bought for customers now served by a CCA. In an

20-year planning horizons. That means a utility must anticipate what its customers will demand far in the future and make investments based on that planning. [More](#)

Working for California | November 2018 Edition

Moving Quickly on Wildfire Safety Planning

There are many safety initiatives underway at the California Public Utilities Commission (CPUC) as it works to assure Californians' access to safe and reliable utility infrastructure and services. Safety-related articles will be featured again in future issues.

The tragic wildfires this month are being investigated by the appropriate authorities. But it is already evident that the loss of life and property due to the wildfires in Northern and Southern California in November 2018 exceed historical marks by any measure.

The California Public Utilities Commission (CPUC) is one of the government agencies tasked with ensuring that investor-owned utilities operate a safe and reliable grid. This includes developing regulations that establish the minimum requirements for utilities to maintain safety of their equipment, including mitigating risks of electric facilities igniting wildfires. CPUC staff perform audits and field inspections to monitor utility compliance with CPUC requirements, as well as

Utility wildfire planning is a focus of new legislation

major fire, CPUC staff conducts an investigation in parallel and in collaboration with the California Department of Forestry and Fire Protection (CAL FIRE). When CPUC staff identifies violations appropriate enforcement actions are taken, which can include fines of \$50,000 per violation per day and additional penalties.

The CPUC works continuously to improve our safety regulations and over the past four years we have adopted more than 20 decisions to strengthen wildfire prevention requirements. But we need to do much more. Acting on one of the

continuously work with utilities to understand their operational practices and identify opportunities for improvement. In situations in which there is indication that utility facilities may have caused a

major bills to emerge from the last legislative session, the CPUC has begun a new proceeding on wildfire mitigation plans required from the state's regulated electric utilities. [More](#)

Supplier Diversity Program Tops \$10 Billion

In 1988, when the CPUC launched its voluntary Utility Supplier Diversity Program so California's regulated utilities would procure more goods and services from firms owned by women, minorities and disabled veterans, the first-year totaled approximately \$7 million in procurement from these groups by utilities.

Celebrating 30 years of Supplier Diversity

In 2017, that number topped \$10 billion, an impressive new benchmark for a program CPUC President Michael Picker recently called "a great accomplishment" and one of the largest business-

driven social justice programs in the state.

"While the goal is to increase competition and allow new entrepreneurs to compete on an even playing field, (the program) also enriches the same communities these companies sell their products and services to," President Picker said during his opening remarks at an Oct. 4 hearing on the program in Richmond that was attended by about 200 people. "It's a way to prevent utility dollars from leaking out of the state. It's a way to help build a business infrastructure that lasts and persists and sustains in communities."

He and his fellow Commissioners heard from utility executives, diversity vendors and interest groups, community activists, and others about the program to encourage investor-owned utilities, water companies, telecommunication service providers, and other CPUC-regulated entities to procure or contract goods and services from women, minority, disabled veteran and/or LGBT-owned businesses.

Launched after a series of statutes passed by the Legislature 30 years ago, 34 California utilities and telecommunications companies now participate in the program.

In the process, the program has become a critical driver of economic development and job creation in diverse communities across California, serving as a template for other states. [More](#)

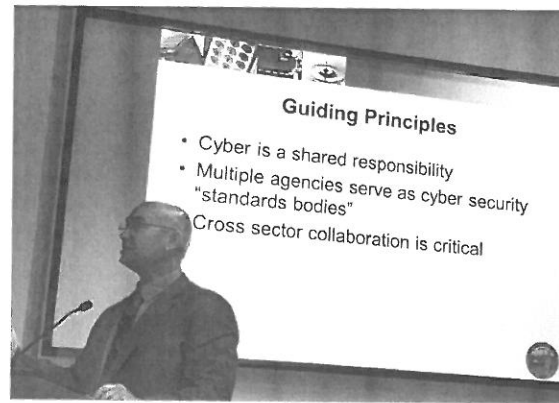

Meet the CPUC's Cybersecurity Manager

Danjel Bout, the CPUC's new Utility Cybersecurity Project Manager, wasn't born when the film "2001: A Space Odyssey" introduced into the mainstream the notion of weaponized Artificial Intelligence and human vulnerability from what is now known as the "Internet of Things."

But in the short 50 years since those notions were dismissed as science fiction, Americans have become dependent on the Internet working properly for such things as electricity, food and service delivery schedules, water delivery and purification, medical research and services, vehicle manufacturing, government subsidies and tax refunds, pension payouts, telephone service, national defense, and social connectivity.

"Cyber threats to infrastructure pose an almost existential threat," Bout says. "We cannot rely on simply learning from experience. We have to anticipate and proactively address the risks we collectively face."

Bout's mission is to not only address threats to utility cybersecurity directly but also to ensure that threats to other sectors do not affect utility services. That means coordinating with every level of government and business at each step of policy creation and implementation – all while insuring

Bout at the Oct. 25 Commission Voting Meeting presenting on his plans for the Utility Cyber Security Branch

that discussing threats does not tip off hackers to vulnerabilities.

"The security engineering mantra 'Security Through Obscurity' is more challenging with government entities who must operate with transparency," Bout says. He speaks with considerable experience when it comes to interagency coordination. [More](#)

Rebuilding Transportation Enforcement

By Commissioner Liane M. Randolph

In February 2017, the CPUC received the results of an independent consultant's study of our Transportation Enforcement Branch (TEB) that—by any measure—were sobering.

As the report by Crowe LLP noted, people inside and outside the CPUC knew of a "widespread awareness that the branch has been struggling to meet its statutory mandates to protect consumers and ensure public safety on California's roadways."

Auditors had reached the same general conclusion, citing high turnover and vacancies in key management positions among the reasons that "the Commission's oversight of passenger carriers is insufficient to address complaints against passenger carriers." This was a problem that cried out to be addressed.

During the three years I have been a CPUC Commissioner, the rise of Transportation Network Companies (TNCs) like Uber and Lyft and the move toward driverless vehicles have disrupted the for-hire transportation industry and made the TEB's shortcomings even more acute. But as I shared at our Oct. 25, 2018 Voting Meeting in San Francisco, I believe we've been able to make some significant strides in under two years.

With strong direction from the Legislature and the provisions of Sen. Jerry Hill's Senate Bill (SB) 541, we have been adding staff, expertise, management capabilities, enforcement, and more.

We've also been able to transfer several regulatory responsibilities to other state agencies that were a better fit, allowing us to more quickly strengthen our core areas of responsibility.

An earlier review in 2014 by the Board of State

There's more work to be done, but I believe are well on our way toward rebuilding our TEB. [More](#)

Rail Transit Safety Program Gets Federal Certification

The CPUC's Rail Transit Safety Program received some good news last month when it was notified by the U.S. Department of Transportation's Federal Transit Administration (FTA) that the program is now certified by the federal agency.

FTA certification is crucial for a number of reasons, not the least of which is that it's required by law. The CPUC State Safety Oversight Program, (SSO) achieved its designation well ahead of the April 2019 deadline, which—also by federal law—cannot be waived or extended.

The certification is considered to be the highest level of safety for rail transit riders and workers and enables the CPUC to continue receiving federal funds for its rail safety program.

California's rail transit safety program has long been considered the gold standard of state rail transit safety programs, but federal certification is crucial because without it, more than \$1 billion in FTA transit grant funds could be withheld

CPUC TO HOLD STATE'S FIRST WILDFIRE TECHNOLOGY INNOVATION SUMMIT

SAN FRANCISCO, November 26, 2018 - The California Public Utilities Commission (CPUC), in conjunction with other state entities and private partners, will host the state's first convening of thought leaders and practitioners from state and local governments, academia, and the technology industry to discuss the challenges of wildfires and tools that can help better manage these devastating disasters.

WHAT: Wildfire Technology Innovation Summit

WHEN: Two days: March 20, 2019, 8 a.m. – 5 p.m. and March 21, 2019, 8 a.m. - noon

WHERE: Sacramento, CA

WHY: To initiate an ongoing dialogue between the technology industry, academic researchers, utilities, and government on the needs and tools to address wildfire challenges.

“We cannot just accept devastating wildfires as the new normal. California is the global leader in technology and innovation. We can develop game-changing solutions and get ahead of this problem,” said CPUC President Michael Picker.

Summit attendees will have the opportunity to hear from leading experts, practitioners, and entrepreneurs and discuss innovative technologies, strategies, and practical tools.

Wildfires in California are occurring more often and are more destructive than ever. There are nearly four million Californians who live in high fire-risk areas defined by the CPUC's fire hazard map, which makes up 44 percent of California's land mass. There are 1.4 million housing units within the high fire threat areas. Further, it is estimated that 4.2 million wooden utility poles and 200,000 miles of overhead electric distribution lines cross through these expanding high fire hazard areas to serve these growing populations.

The CPUC is one of the government agencies tasked with ensuring that investor-owned utilities operate a safe and reliable grid. To ensure public safety in this time of increased wildfire occurrence, the CPUC is addressing wildfires in many settings, including initiating regulatory proceedings, implementing new legislation such as Senate Bill 901 (Dodd, 2018), engaging with communities on de-energization programs, and working with other state agencies on developing wildfire plans.

Visit <http://firetechsummit.cpuc.ca.gov/> for information on cost of attendance and a draft agenda. Additional information, including location address, will be posted on the site as it becomes available.

While a quorum of Commissioners and/or their staff may attend, no official action will be taken.

If specialized accommodations are needed to attend, such as non-English or sign language interpreters, please contact the CPUC's Public Advisor's Office at public.advisor@cpuc.ca.gov or toll free at 866-849-8390 at least three business days in advance of the event, if possible.

The CPUC regulates services and utilities, protects consumers, safeguards the environment, and assures Californians' access to safe and reliable utility infrastructure and services. For more information on the CPUC, please visit www.cpuc.ca.gov.

**CPUC TO HOLD STATE'S FIRST WILDFIRE TECHNOLOGY INNOVATION
SUMMIT**

SAN FRANCISCO, November 26, 2018 - The California Public Utilities Commission (CPUC), in conjunction with other state entities and private partners, will host the state's first convening of thought leaders and practitioners from state and local governments, academia, and the technology industry to discuss the challenges of wildfires and tools that can help better manage these devastating disasters.

WHAT: Wildfire Technology Innovation Summit

WHEN: Two days: March 20, 2019, 8 a.m. – 5 p.m. and March 21, 2019, 8 a.m. - noon

WHERE: Sacramento, CA

WHY: To initiate an ongoing dialogue between the technology industry, academic researchers, utilities, and government on the needs and tools to address wildfire challenges.

"We cannot just accept devastating wildfires as the new normal. California is the global leader in technology and innovation. We can develop game-changing solutions and get ahead of this problem," said CPUC President Michael Picker.

Summit attendees will have the opportunity to hear from leading experts, practitioners, and entrepreneurs and discuss innovative technologies, strategies, and practical tools.

Wildfires in California are occurring more often and are more destructive than ever. There are nearly four million Californians who live in high fire-risk areas defined by the [CPUC's fire hazard map](#), which makes up 44 percent of California's land mass. There are 1.4 million housing units within the high fire threat areas. Further, it is estimated that 4.2 million wooden utility poles and 200,000 miles of overhead electric distribution lines cross through these expanding high fire hazard areas to serve these growing populations.
